1. Draw a deterministic FA for the set of all binary strings with the property that:
   they contain at least one pair of 1s that are separated by an odd number of 0s.
   For example, $1010$, $10011$, and $001110001$ should be accepted, but not $10010011$.

2. Give an RE for the above language.
