A. Challenge #1 – Practice Connecting

Over the weekend, see how far you can get with the following (similar to what lab 1 usually has you do). Print this out and fill in the blanks with the required commands.

1. First, connect using SSH (on Windows) or Terminal (on a Mac)
2. Once you log in, use the Unix/Linux commands to do the following (use the Unix cheat sheet for any of the commands you don't know):
   a. Type the command to see where you are currently located. _______
   b. Then type the command to see a listing of everything that is in that location where you are currently located. _______
   c. Create a new directory called “101” (not including the quotes). ______________
   d. Repeat step b. to see a listing of everything at your current location. _______ You should now see that new directory that you created at step c.
   e. Then change directories into the one that you just created. ______________
   f. Within the 101 directory, create another directory called “Practice” (without the quotes; doesn't have to be capitalized). ______________
   g. Type the command again to see the listing of everything in your current location to make sure your new directory called Practice is there. __________
   h. Change directories into your new Practice directory. ______________
   i. Type the command to get you straight back to your root directory. ______________
