Click your selection (there is a complete Contents on page v):

**Introduction**
Introduces your SURFboard cable modem and the controls on the Top and Front Panel and Rear Panel.

**Before You Begin**
Lists the items needed to install your SURFboard cable modem and describes Precautions, Signing Up for Service, and Computer System Requirements.

**Installation and Configuration Overview**
Provides an overview and links for cabling and configuring your SURFboard cable modem, including Setting Up a USB Driver.

**Troubleshooting**
Provides suggestions to fix common problems.

**Contact Us**
Provides contact information.

**Frequently Asked Questions**
Provides answers to common questions about the SURFboard cable modem.
WARNING: TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS DEVICE TO RAIN OR MOISTURE. THE DEVICE SHALL NOT BE EXPOSED TO DRIPPING OR SPLASHING AND NO OBJECTS FILLED WITH LIQUIDS, SUCH AS VASES, SHALL BE PLACED ON THE DEVICE.

CAUTION: TO ENSURE REGULATORY AND SAFETY COMPLIANCE, USE ONLY THE PROVIDED POWER AND INTERFACE CABLES. TO PREVENT ELECTRICAL SHOCK, DO NOT USE THIS PLUG WITH AN EXTENSION CORD, RECEPTACLE, OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

CAUTION: DO NOT OPEN THE UNIT. DO NOT PERFORM ANY SERVICING OTHER THAN THAT CONTAINED IN THE INSTALLATION AND TROUBLESHOOTING INSTRUCTIONS UNLESS YOU ARE QUALIFIED TO DO SO. REFER ALL SERVICING TO QUALIFIED SERVICE PERSONNEL.

Caution: Changes Or Modifications Not Expressly Approved By The Party Responsible For Compliance Could Void The User’s Authority To Operate The Equipment.

It is recommended that the customer install an AC surge arrester in the AC outlet to which this device is connected. This is to avoid damaging the equipment by local lightning strikes and other electrical surges.

This product was qualified under test conditions that included the use of the supplied cable between system components. To be in compliance with regulations, the user must use this cable and install it properly.

Different types of cord sets may be used for connections to the main supply circuit. Use only a main line cord that complies with all applicable product safety requirements of the country of use.

Installation of this product must be in accordance with national wiring codes.

To prevent overheating, do not block the ventilation holes on the sides of the cable modem.

Wipe the cable modem with a clean, dry cloth. Never use cleaning fluid or similar chemicals. Do not spray cleaners directly on the unit or use forced air to remove dust.
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC.

Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This Class B digital apparatus meets all requirements of the Canadian Interference Causing Equipment Regulations.

Cet appareil numérique de la classe B respects toutes les exigences du Règlement sur le matériel brouilleur du Canada.
This product is provided with a separate Regulatory, Safety, Software License, and Warranty Information card. If one is not provided with this product, please ask your service provider or point-of-purchase representative, as the case may be.

- **THIS PRODUCT IS IN COMPLIANCE WITH ONE OR MORE OF THE STANDARDS LISTED ON THE REGULATORY, SAFETY, SOFTWARE LICENSE, AND WARRANTY INFORMATION CARD. NOT ALL STANDARDS APPLY TO ALL MODELS.**

- **NO WARRANTIES OF ANY KIND ARE PROVIDED BY MOTOROLA WITH RESPECT TO THIS PRODUCT, EXCEPT AS STATED ON THE REGULATORY, SAFETY, SOFTWARE LICENSE, AND WARRANTY INFORMATION CARD. MOTOROLA’S WARRANTIES DO NOT APPLY TO PRODUCT THAT HAS BEEN REFURBISHED OR REISSUED BY YOUR SERVICE PROVIDER.**

Introduction

Easier!
Unlike dial-up modems or ISDN, you’re always on, always connected. For easiest set-up, use the Installation Assistant on the SURFboard Cable Modem CD-ROM.

Faster!
Your cable modem is up to 100 times faster than a dial-up modem. It lets you enjoy surfing the web without the long wait. Because many network and other factors can affect performance, the actual speed will vary.

Better!
Your cable modem is made by the company with over 50 years of cable TV expertise.

Congratulations, you have a new Motorola® SURFboard® cable modem. It provides high-speed access to the Internet and other online services. This cable modem transmits and receives data much faster than traditional dial-up or ISDN modems. Unlike a dial-up modem, your SURFboard cable modem is always online. Just open your browser and surf!

You can use your high-speed, upgradeable cable modem to connect one or more computers in your home or business to the Internet. You can connect:

- A single computer equipped with a Universal Serial Bus (USB) port directly to the USB port on the SURFboard cable modem
- A single computer equipped with an Ethernet adapter directly to the Ethernet port on the SURFboard cable modem
- Two computers; one to the USB port and one to the Ethernet port
- Up to 32 computers to a single SURFboard cable modem using an Ethernet hub, as shown in “Cabling for Multiple Users” on page 40
The model number on your cable modem may be different than in the illustrations and screen images in this guide.

**Top and Front Panel**

For added security, you can press the Standby button (1) to suspend your Internet connection. No data is transmitted or received from the Internet when the Standby light is on. All other front-panel lights turn off until you press the Standby button again.

The lights provide information about power, communications, and errors:

</tbody>
</table>

You will need 75-ohm coaxial cable with F-type connectors to connect your cable modem to the nearest cable outlet. If a TV is connected to the cable outlet, you may need a 5-900 MHz RF splitter and a total of three coaxial cables to connect both the TV and the cable modem. The coaxial cable and RF splitter are available at consumer electronic stores.
Precautions

Postpone cable modem installation until there is no risk of thunderstorm or lightning activity in the area.

To avoid damaging the cable modem with static electricity:

- Always first connect the coaxial cable to the grounded cable TV wall outlet.
- Before you connect or disconnect the USB or Ethernet cable from your cable modem or PC, always touch the coaxial cable connector on the cable modem to release any static charges.

To prevent overheating the cable modem, do not block the ventilation holes on its sides.

Do not open the cable modem. Refer all service to your cable service provider.

Wipe the cable modem with a clean, dry cloth. Never use cleaning fluid or similar chemicals. Do not spray cleaners directly on the unit or use forced air to remove dust.
Signing Up for Service

You must sign up with a cable service provider to access the Internet and other online services.

To activate your service, call your local cable service provider.

To receive data service, you need to provide the MAC address printed on the bar code label marked CM HFC MAC ID on the bottom of the cable modem. You can record it here:

00 : _____ : _____ : _____ : _____ : _____

You should ask your cable service provider the following questions:

• Do you have any special system requirements?
• When can I begin to use my cable modem?
• Are there any files I need to download after I am connected?
• Do I need a user name or password to access the Internet or use e-mail?
You can use any web browser such as Microsoft® Internet Explorer or Netscape Navigator® with your SURFboard cable modem.

For Microsoft Windows computers, the Installation Assistant application automatically checks your system configuration. You can start the Installation Assistant from the Main Menu on the SURFboard Cable Modem CD-ROM.

**Computer System Requirements**

Your SURFboard cable modem is compatible with Microsoft Windows®, Macintosh®, and UNIX® computers.

**Ethernet Card**

You can use the Ethernet connection with any Windows, Macintosh, or UNIX computer equipped with a 10Base-T or 10/100Base-T Ethernet card.

*Windows® 95, UNIX, or Macintosh computers must use the Ethernet connection.*

*If you use an Ethernet card, it must be installed in your computer before you install the cable modem. If it is not installed, follow the installation instructions provided with your Ethernet card.*

**USB Connection**

You can use the USB connection with any PC running Windows® 98, Windows® 2000, Windows Me®, or Windows XP™ that has a USB interface. The USB connection requires special USB driver software that is supplied on the SURFboard Cable Modem CD-ROM.

Installation and Configuration Overview

To install and configure your cable modem for a single PC running Microsoft Windows, you can use the Installation Assistant.

Otherwise, to install and configure your cable modem:

1. Install the cables as described in one of:
   - “Cabling and Startup for a Single User” on page 9
   - “Cabling for Multiple Users” on page 40

2. If you are using the USB port only, go to “Setting Up a USB Driver” on page 11. Ethernet users can skip this step.

3. Configure TCP/IP and verify the IP address for your computer following one of:
   - “Configuring TCP/IP” on page 22
   - Your Macintosh or UNIX user manual
Cabling and Startup for a Single User

Allow 5 to 30 minutes to power up the first time because the SURFboard cable modem must find and lock on the appropriate channels for communications.

1. Be sure your computer is on and the cable modem is unplugged.
2. Connect one end of the coaxial cable to the cable outlet or splitter. Connect the other end of the coaxial cable to the CABLE connector on the cable modem. *Hand-tighten the connectors to avoid damaging them.*
3. Insert the SURFboard Cable Modem CD-ROM into your CD-ROM drive.
4. Plug the power cord into the +12VDC connector on the cable modem and the electrical outlet. *This turns the SURFboard cable modem on. You do not need to unplug it when not in use.*
5. Check that the lights on the cable modem front cycle through this sequence:
   - Power flashes during the self-test and changes to solid green when the self-test is successfully complete.
   - Receive flashes while scanning for the receive (downstream) channel and changes to solid green when it is connected.
   - Send flashes while scanning for the send (upstream) channel and changes to solid green when it is connected.
   - Online flashes while the cable modem downloads configuration data and changes to solid green when the download is complete.
6 Connect your computer to the cable modem using USB or Ethernet:

**USB:** Be sure the SURFboard Cable Modem CD-ROM is inserted in your CD-ROM drive. Connect the USB cable to the USB port on the cable modem. Connect the other end to the USB port on your computer. Then perform “Setting Up a USB Driver” on page 11.

**Ethernet:** Connect the provided straight-through Ethernet cable to the Ethernet connector on the cable modem. Connect the other end to the Ethernet port on your computer. *Ethernet users do not need to set up USB.*

7 Perform the procedures for “Configuring TCP/IP” on page 22.
Setting Up a USB Driver

The following subsections describe setting up a USB driver. Perform the appropriate procedure for your Windows version:

- “Setting Up a USB Driver in Windows 98” on page 12
- “Setting Up a USB Driver in Windows 2000” on page 16
- “Setting Up a USB Driver in Windows Me” on page 20
- “Setting Up a USB Driver in Windows XP” on page 21

When you finish setting up the USB driver, you can continue with “Configuring TCP/IP” on page 22.

The SURFboard cable modem USB driver does not support Macintosh or UNIX computers. For those systems, you can connect through Ethernet only.

Be sure the SURFboard Cable Modem CD-ROM is inserted in your CD-ROM drive before you plug in the USB cable.
Setting Up a USB Driver in Windows 98

Be sure the SURFboard Cable Modem CD-ROM is inserted in your CD-ROM drive before you plug in the USB cable. This CD contains the USB drivers and must be inserted and read by the PC before you connect the cable modem to the PC.

A few seconds after you complete the USB connection, the Add New Hardware Wizard window is displayed.

1. Click Next.
2. Be sure “Search for the best driver for your device” is selected.
3. Click Next.
Setting Up a USB Driver in Windows 98, continued

4 Be sure “CD-ROM drive” is the only box checked.

5 Click Next.

The message “Please wait while Windows searches for a new driver for this device” is displayed.

6 If your computer successfully locates the driver, skip to step 8.

If your computer does not locate the driver, the previous window is displayed again. Select Specify a location and type the location of your CD-ROM drive.

To load the driver successfully, you may need to click Browse to manually select the driver file from the CD-ROM. For the SB5100, select the NetMotCM.sys file.

Or

For the SB5120, select the SB5120.inf file.

7 Click Next.
Setting Up a USB Driver in Windows 98, continued

8 Select The updated driver... and click Next.

If this window is not displayed, verify that the SURFboard Cable Modem CD-ROM is properly inserted in the CD-ROM drive. If you still cannot find the correct driver file, click Cancel to cancel the installation and perform the procedure for “Removing the USB Driver from Windows 98 or Windows Me” on page 45. Then repeat this procedure.

9 After the window at bottom left is displayed, click Next.

If a window with the message Copying Files... displays and asks for your CD-ROM drive, type your CD-ROM drive letter (for example, “D:" ) and click OK.

If an Insert Disk window similar to the one below is displayed, Windows 98 system files are needed to complete the installation. To install the files, insert your Windows 98 CD-ROM in the CD-ROM drive and click OK.

Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Setting Up a USB Driver in Windows 98, continued

After all the necessary files are loaded, the window at upper left is displayed confirming a successful installation.

10 Click Finish. The window at bottom left is displayed.

11 Click Yes to restart your computer.

When you finish setting up the USB driver, you can continue with “Configuring TCP/IP in Windows 95, 98, or Windows Me” on page 23.

If you have difficulties setting up the USB driver, perform “Removing the USB Driver from Windows 98 or Windows Me” on page 45 and repeat this procedure. If that does not correct your problem, see the Regulatory, Safety, Software License, and Warranty Information card provided with your SURFboard cable modem for information about obtaining warranty service.
Setting Up a USB Driver in Windows 2000

Be sure the SURFboard Cable Modem CD-ROM is inserted into the CD-ROM drive before you plug in the USB cable. A few seconds after you complete the USB connection, the Found New Hardware window is displayed.

1. Click Next.

2. Be sure “Search for a suitable driver for my device” is selected.

3. Click Next.

Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Setting Up a USB Driver in Windows 2000, continued

4 Be sure “CD-ROM drives” is the only box checked.

5 Click Next.

6 Click Next.

If the Insert Disk window is displayed, be sure the SURFboard Cable Modem CD-ROM is in the CD-ROM drive and follow steps 7 to 11. Otherwise, you can skip to step 12.
Setting Up a USB Driver in Windows 2000, continued

7 On the Insert Disk window, click OK. The Files Needed window is displayed.

8 For the SB5100, if necessary, select your CD-ROM drive in the "Copy files from" list.

Or

For the SB5120, be sure that the SB5120 CD-ROM is in the CD-ROM drive.

9 For the SB5100, Click Browse.

Or

For the SB5120, if necessary, select your CD-ROM drive in the “Copy files from” list and skip to step 11.

10 For the SB5100, double-click the NetMotCM.sys file in the CD-ROM root directory. The Files Needed window is displayed.

11 Click OK. The Found New Hardware Wizard window is displayed.
Setting Up a USB Driver in Windows 2000, continued

12 Click Finish to complete the installation.

When you finish setting up the USB driver, you can continue with "Configuring TCP/IP in Windows 2000" on page 26.

If you have any difficulties setting up the USB driver, perform "Removing the USB Driver from Windows 2000" on page 49 and repeat this procedure.
Setting Up a USB Driver in Windows Me

Be sure the SURFboard Cable Modem CD-ROM is inserted into the CD-ROM drive before you plug in the USB cable. A few seconds after you complete the USB connection, the Add New Hardware Wizard window is displayed.

1. Click Next. Windows automatically searches for the correct USB drivers and installs them. If the installation is successful, the window at bottom left is displayed.

2. Click Finish to complete the installation. Otherwise, be sure the SURFboard Cable Modem CD-ROM is correctly inserted in your CD-ROM drive.

When you finish setting up the USB driver, you can continue with "Configuring TCP/IP in Windows 95, 98, or Windows Me" on page 23.

Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Setting Up a USB Driver in Windows XP

Be sure the SURFboard Cable Modem CD-ROM is inserted into the CD-ROM drive before you plug in the USB cable. A few seconds after you complete the USB connection, the Found New Hardware Wizard window is displayed.

1. Be sure “Install the software automatically” is selected.
2. Click Next. Windows automatically searches for the correct USB drivers and installs them. If the installation is successful, the window at bottom left is displayed.
3. Click Finish to complete the installation. Otherwise, be sure the SURFboard Cable Modem CD-ROM is correctly inserted in your CD-ROM drive.

When you finish setting up the USB driver, you can continue with “Configuring TCP/IP in Windows XP” on page 30.

Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Configuring TCP/IP

The SURFboard cable modem contains all required software. You do not need to configure the cable modem, but you must be sure that your computer is configured for TCP/IP (a protocol for communication between computers). Perform one of:

- “Configuring TCP/IP in Windows 95, 98, or Windows Me” on page 23
- “Configuring TCP/IP in Windows 2000” on page 26
- “Configuring TCP/IP in Windows XP” on page 30
- Follow the instructions in your Macintosh or UNIX user manual

After configuring TCP/IP, perform one of the following to verify the IP address:

- “Verifying the IP Address in Windows 95, Windows 98, or Windows Me” on page 37
- “Verifying the IP Address in Windows 2000 or Windows XP” on page 38
- Follow the instructions in your Macintosh or UNIX user manual

Your cable service provider may provide additional instructions to set up your computer.
Configuring TCP/IP in Windows 95, 98, or Windows Me

1. On the Windows Desktop, click Start.
2. Select Settings and then Control Panel from the pop-up menus.
3. Double-click the Network icon on the Control Panel window.
4. Select the Configuration tab on the Network window.
5. Verify that TCP/IP is installed for the adapter that will be used to connect to the SURFboard cable modem. If TCP/IP is installed, then skip to step 10. If TCP/IP is not installed for the adapter, continue with step 6.

Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Configuring TCP/IP in Windows 95, 98, or Windows Me, continued

6. Select the adapter to be used for the SURFboard cable modem connection and then click **Add**.

7. Double-click the **Protocol** option on Select Network Component Type window.

8. Click **Microsoft** in the Manufacturers section and click **TCP/IP** in the Network Protocol section of Select Network Protocol window.

9. Click **OK**.
Configuring TCP/IP in Windows 95, 98, or Windows Me, continued

10  Click TCP/IP on the Network window. If there is more than one TCP/IP entry, choose the one for the Ethernet card or USB port connected to the cable modem.

11  Click Properties. The TCP/IP window is displayed.

12  Click the IP Address tab.

13  Click Obtain an IP address automatically.

14  Click OK to accept the TCP/IP settings.

15  Click OK to close the Network window.

16  Click OK when prompted to restart your computer and click OK again.

When you complete TCP/IP configuration, go to "Verifying the IP Address in Windows 95, Windows 98, or Windows Me" on page 37.
Configuring TCP/IP in Windows 2000

1. On the Windows Desktop, click Start.
2. Select Settings and then Control Panel from the pop-up menus.
3. Double-click the Network and Dial-up Connections icon on the Control Panel window.
4. On the Network and Dial-up Connections window, double-click Local Area Connection number. The value of number varies from system to system. The Local Area Connection number Status window is displayed.
5 Click Properties. Information similar to the lower window is displayed.

6 If Internet Protocol (TCP/IP) is in the list of components, TCP/IP is installed. You can skip to step 10.

   If Internet Protocol (TCP/IP) is not in the list, click Install. The Select Network Component Type window is displayed. Continue with step 7.
Configuring TCP/IP in Windows 2000, continued

7 Click **Protocol** on the Select Network Component Type window and click **Add**. The Select Network Protocol window is displayed.

9 Click **OK**. The Local Area Connection *number* Properties window is re-displayed.
Configuring TCP/IP in Windows 2000, continued

10 On the Local Area Connection number Properties window, be sure the box next to Internet Protocol (TCP/IP) is checked.

11 Click Properties. The Internet Protocol (TCP/IP) Properties window is displayed as shown at bottom left.

12 Be sure Obtain IP address automatically and Obtain DNS server address automatically are selected.

13 Click OK to accept the TCP/IP settings.

14 Click OK to close the Local Area Connection number Properties window.

15 Click OK when prompted to restart your computer and click OK again.

When you complete the TCP/IP configuration, go to “Verifying the IP Address in Windows 2000 or Windows XP” on page 38.
Configuring TCP/IP in Windows XP

1. On the Windows desktop, click **Start** to display the Start window shown at left.

2. Click **Control Panel** to display the Control Panel window. The display varies, depending on your Windows XP view options. If the display is a Category view as shown below, continue with step 3. Otherwise, skip to step 5.

3. Click **Network and Internet Connections** to display the Network and Internet Connections window.
Configuring TCP/IP in Windows XP, continued

4. On the Network and Internet Connections Pick a task window, click **Network Connections** to display the LAN or High-speed Internet connections. Skip to step 6.
5 If a classic view similar to at left is displayed, click **Network Connections** to display the LAN or High-speed Internet connections.
Configuring TCP/IP in Windows XP, continued

6 Right-click on your network connection. If more than one connection is displayed, be sure to select the one for your network interface.

7 Select Properties from the pop-up menu to display the Local Area Connection Properties window.
8 On the Local Area Connection Properties window, be sure Internet Protocol (TCP/IP) is checked. If it is not checked, check it.

9 Select **Internet Protocol (TCP/IP)** and click **Properties** to display the Internet Protocol (TCP/IP) Properties window.
10. On the Internet Protocol (TCP/IP) Properties window, verify that the settings are correct, as shown at left.

11. Click **OK** to close the TCP/IP Properties window.

12. Click **OK** to close the Local Area Connection Properties window.

When you complete the TCP/IP configuration, go to “Verifying the IP Address in Windows 2000 or Windows XP” on page 38.
Verifying the IP Address

The following subsections describe verifying an IP Address. Perform the appropriate procedure for your Windows version:

- “Verifying the IP Address in Windows 95, Windows 98, or Windows Me” on page 37
- “Verifying the IP Address in Windows 2000 or Windows XP” on page 38

For a Macintosh or UNIX system, refer to your user guide.
Verifying the IP Address in Windows 95, Windows 98, or Windows Me

To check the IP address:

1. On the Windows Desktop, click Start.
2. Select Run. The Run window is displayed.
3. Type winipcfg.exe and click OK. A window similar to the example at top left is displayed.
4. Select your adapter name — the Ethernet card or USB device.
5. Click Renew.
6. Click OK after the system displays an IP address.

If after performing this procedure your computer cannot access the Internet, call your cable service provider for help.

The values for Adapter Address, IP Address, Subnet Mask, and Default Gateway on your PC will be different than in the image above.

In Windows 98, if autoconfiguration is displayed before the IP Address, call your service provider.
Verifying the IP Address in Windows 2000 or Windows XP

To check the IP address:

1. On the Windows Desktop, click Start.
2. Select Run. The Run window is displayed.
3. Type cmd and click OK. A window like the one at upper left is displayed.
4. Type ipconfig and press ENTER to display your IP configuration. A display, like the window at upper left, indicates a normal configuration.

If an Autoconfiguration IP Address is displayed as in the window at bottom left, there is an incorrect connection between your PC and the cable modem or there are cable network problems. Check:

- Your cable connections
- Whether you can see cable-TV channels on your television

After verifying your cable connections and proper cable-TV operation, you can renew your IP address.
Renewing Your IP Address

To renew your IP address:

1. Type `ipconfig /renew` and press ENTER. If a valid IP address is displayed as shown at left, Internet access should be available.

2. Type `exit` and press ENTER to return to Windows.

If after performing this procedure your computer cannot access the Internet, call your cable service provider for help.
Cabling for Multiple Users

The SURFboard cable modem supports several multiple user configurations. Along with an optional hub or router, it can serve as an Internet gateway for up to 32 computers. Not all service providers support multiple user service. For information about multiple user service, contact your cable service provider.

Ethernet and USB

You can connect the USB port on one computer and the Ethernet port on another computer directly to the cable modem, as shown at top left.

Caution

Do not connect both the Ethernet and USB cables to the same computer.

You can connect a single computer to the USB port and from one to 31 remaining users to an Ethernet hub, as shown at bottom left. You cannot connect more than one computer to the cable modem through the USB port.
Ethernet

You can connect up to 32 computers to an Ethernet hub connected to a SURFboard cable modem, as shown at left.
Troubleshooting

If the solutions listed here do not solve your problem, contact your cable service provider. Before calling your service provider, try unplugging and plugging in the cable modem power cord in the AC wall outlet to restart the cable modem. Restarting the cable modem may take 5 to 30 minutes.

Before calling your service provider, try pressing the reset button on the rear panel. Resetting the cable modem may take 5 to 30 minutes. Your service provider may ask for the status of the front-panel lights as described in “Front-Panel Lights and Error Conditions” on page 44.

<table>

| Green POWER light is off | Check that the power cord is properly plugged into the electrical outlet and the cable modem.  
|                          | Check that the electrical outlet is working.                                      
|                          | If the Standby light is on, the Internet connection is off. Press the Standby button to reconnect to the Internet. |
Cannot send or receive data

Check the lights on the front panel. Note the first light from top to bottom that is off. This light indicates where the error occurred as described in “Front-Panel Lights and Error Conditions” on page 44.

If all lights are off except the Standby light, the cable modem is in Standby mode. Press the Standby button to reconnect your Internet service.

If you have cable TV, check that your TV is working and the picture is clear. If you cannot receive your regular TV channels, your data service will not function.

Check the coaxial cable at the cable modem and wall outlet. Hand-tighten if necessary.

Check the IP address. Follow the steps in “Verifying the IP Address in Windows 95, Windows 98, or Windows Me” on page 37 or “Verifying the IP Address in Windows 2000 or Windows XP” on page 38. Call your cable service provider if you need an IP address.

Check that the USB or Ethernet cable is properly connected to the cable modem and your computer.

Problems related to unsuccessful USB driver installation

Remove the USB driver. Follow the instructions in one of:

- “Removing the USB Driver from Windows 98 or Windows Me” on page 45
- “Removing the USB Driver from Windows 2000” on page 49
- “Removing the USB Driver from Windows XP” on page 54

Removing the USB Driver from Windows 98 or Windows Me

1. On your Windows Desktop, right-click the **Network Neighborhood** icon for Windows 98 or **My Network Places** for Windows Me and then select **Properties**. The Network window is displayed.

2. Click the **Motorola SURFboard USB Cable Modem**.

   Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Removing the USB Driver from Windows 98 or Windows Me, continued

3 Click **Remove**. The Network window no longer displays Motorola SURFboard USB Cable Modem in the list.

4 Click **OK**. The System Settings Change window is displayed.

5 **Disconnect the USB cable from your PC** or cable modem.

6 Click **Yes** to restart your computer.
Removing the USB Driver from Windows 98 or Windows Me, continued

7. Insert the SURFboard Cable Modem CD-ROM in the CD-ROM drive. After a short time, a window with language choices is displayed.

8. Press the Esc key on the keyboard to exit the start-up screens.

9. To start Windows Explorer, click Start and select Run.

10. In the Run window, type explorer and click OK. The Exploring window is displayed.

11. Select your CD-ROM drive (D: in the image at left).

12. Double-click remove or remove.exe to run the Remove utility from the SURFboard Cable Modem CD-ROM. The SURFboard Cable Modem USB Driver Removal window is displayed.

Your Windows Explorer may appear slightly different than in the image on this page. There are slight variations between Windows versions and you can configure Windows Explorer as you like.
Removing the USB Driver from Windows 98 or Windows Me, continued

13 Click **Remove Driver** to remove the USB driver.

After you remove the USB driver, re-install the USB driver on your computer:

- “Setting Up a USB Driver in Windows 98” on page 12
- “Setting Up a USB Driver in Windows Me” on page 20

If you continue to have problems, contact your cable service provider.
Removing the USB Driver from Windows 2000

1. On your Windows desktop, click Start.
2. Click Settings.
3. Click Control Panel to display the Control Panel window.
4. Double-click System to display the System Properties window.
Removing the USB Driver from Windows 2000, continued

5. On the System Properties window, click the **Hardware** tab.

6. Click the **Device Manager** button to display the Device Manager window:
Removing the USB Driver from Windows 2000, continued

7 On the Device Manager window, double-click Network Adapters.

8 Click the Motorola SURFboard USB Cable Modem. The Uninstall icon is displayed on the window near the top.

9 Click the Uninstall icon.

10 Close the Device Manager window.

11 Close the Control Panel window.

Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Removing the USB Driver from Windows 2000, continued

12 Insert the SURFboard Cable Modem CD-ROM in the CD-ROM drive. After a short time, a window with language choices is displayed.

13 Press the Esc key on the keyboard to exit the start-up screens.

14 To start Windows Explorer, click Start and select Run.

15 In the Run window, type explorer and click OK.

16 Double-click My Computer.

17 Double-click the Motorola CD icon (D: in the image).

18 Double-click remove or remove.exe to run the Remove utility from the SURFboard Cable Modem CD-ROM. The SURFboard Cable Modem USB Driver Removal window is displayed.

Your Windows Explorer may appear slightly different than in the image on this page. There are slight variations between Windows versions and you can configure Windows Explorer as you like.
Removing the USB Driver from Windows 2000, continued

19 The window on the left is displayed. Be sure the USB cable is disconnected.

20 Click Remove Driver.

Informational messages similar to the ones shown at left are displayed on the SURFboard Cable Modem USB Driver Removal window.

After you remove the USB driver, re-install the USB driver following “Setting Up a USB Driver in Windows 2000” on page 16. If you continue to have problems, contact your cable service provider.
Removing the USB Driver from Windows XP

1. On the Windows desktop, click **Start** to display the Start window shown at left.

2. Click **Control Panel** to display the Control Panel window. The display varies, depending on your Windows XP view options.

3. If a Category view similar to below is displayed, click **Performance and Maintenance**. Otherwise, skip to step 5.
Removing the USB Driver from Windows XP, continued

4 On the Performance and Maintenance window, click **System** to display the System Properties window. Skip to step 6.
Removing the USB Driver from Windows XP, continued

5 If a classic view similar to at left is displayed, click System to display the System Properties window.
Removing the USB Driver from Windows XP, continued

6  On the System Properties window, click the **Hardware** tab.
7  Double-click the **Device Manager** button to display the Device Manager window.
Removing the USB Driver from Windows XP, continued

8 On the Device Manager window, double-click **Network adapters**.

9 Click the **Motorola SURFboard USB Cable Modem**. The Uninstall icon is displayed on the window near the top.

10 Click the **Uninstall** icon.

11 Close the Device Manager window.

12 Close the Control Panel window.

Although your SURFboard cable modem model number may be different than in the images in this guide, the procedure is the same.
Removing the USB Driver from Windows XP, continued

13 Insert the SURFboard Cable Modem CD-ROM in the CD-ROM drive. After a short time, a window with language choices is displayed.

14 Press the Esc key on the keyboard to exit the start-up screens.

15 To start Windows Explorer, click Start and select Run.

16 In the Run window, type explorer and click OK.

17 Double-click My Computer.

18 Double-click the Motorola CD icon (D: in the image).

19 Double-click remove or remove.exe to run the Remove utility from the SURFboard Cable Modem CD-ROM. The SURFboard Cable Modem USB Driver Removal window is displayed.

Your Windows Explorer may appear slightly different than in the image on this page. There are slight variations between Windows versions and you can configure Windows Explorer as you like.
Removing the USB Driver from Windows XP, continued

20 The window on the left is displayed. Be sure the USB cable is disconnected.

21 Click Remove Driver.

Informational messages similar to the ones shown at left are displayed on the SURFboard Cable Modem USB Driver Removal window.

After you remove the USB driver, re-install the USB driver following "Setting Up a USB Driver in Windows XP" on page 21. If you continue to have problems, contact your cable service provider.
Contact Us

For information about customer service, technical support, or warranty claims, see the Regulatory, Safety, Software License, and Warranty Information card provided with your SURFboard cable modem.

In the United States and Canada, if you need assistance while working with the SURFboard cable modem and related equipment supplied by Motorola:

If you rent or lease your SURFboard cable modem
Contact your cable service provider.

If you own your SURFboard cable modem
Call 1-877-466-8646 for technical and warranty support. Support is available 24 hours a day, seven days a week.

For answers to typical questions, see “Frequently Asked Questions” on page 62.

For information about Motorola consumer cable products, education, and support, visit broadband.motorola.com/.
**Frequently Asked Questions**

Here are answers to questions our customers frequently ask.

**Q** What is high-speed cable Internet access?

**A** Cable Internet access uses cable television wires instead of telephone lines to connect to the Internet. It is extremely fast and affordable and does not tie up telephone lines for incoming or outgoing calls and faxes.

**Q** How fast are cable modems?

**A** Cable modems offer Internet access at speeds up to 100 times faster than a traditional phone modem. You can experience speeds of over 1,000 Kbps. Due to network condition such as traffic volume and the speed of the sites you visit, actual speed may vary. Many network and other factors can affect download speeds.

**Q** Can I still watch cable TV while using my cable modem?

**A** Yes, your cable TV line can carry the TV signal while you send and receive information on the Internet.

**Q** What are CableLabs Certified, DOCSIS and Euro-DOCSIS?

**A** CableLabs® Certified, DOCSIS, and Euro-DOCSIS are the industry standards for high-speed data distribution over cable television system networks. They are intended to ensure that all compliant cable modems interface with all compliant cable systems. Your Motorola SURFboard cable modem is DOCSIS or Euro-DOCSIS certified.
Q If I have a cable modem, can I still use my old 28.8 Kbps or 56 Kbps modem?
A Yes! Although once you’ve experienced the speed of cable Internet access, you’ll never again want to wait for traditional dial-up services.

Q I have more than one computer. Do I need more than one SURFboard cable modem?
A No, not if your computers are connected on a network. The SURFboard cable modem supports current Internet connection sharing technologies to enable you to connect up to 32 PCs to the Internet using a single cable modem.

Q Do I need to change my Internet service provider (ISP)?
A Currently, most Internet service providers do not provide cable Internet access. Contact your cable company for your specific information.

Q Do I need to subscribe to cable TV to get cable Internet access?
A No, but you will need to subscribe to cable Internet service. Some systems require that you subscribe to basic service before you can get Internet access and/or offer a discount when you use your own cable modem. Check with your local cable company for specific information.

Q What type of technical support is available?
A For questions about your Internet service, connection, or cable modem, contact your cable service provider.

Q What do I do if my SURFboard cable modem stops working?
A “Troubleshooting” on page 42 provides tips to diagnose problems and simple solutions. If you continue to have problems, contact your cable service provider or Motorola as described in “Contact Us” on page 61.
Glossary

coaxial cable (coax)  A type of wire consisting of a center wire surrounded by insulation and a grounded shield of braided wire. The shield minimizes electrical and radio frequency interference.

DOCSIS  The CableLabs Data-Over-Cable Service Interface Specification defines interface standards for cable modems and supporting equipment.

download  To copy a file from one computer to another. You can use the Internet to download files from a server to your home PC. A DOCSIS cable modem downloads its configuration from a server during start-up.

downstream  In a cable data network, downstream describes the direction of data received by your computer from the Internet.

Ethernet  The most widely used type of local area network (LAN). The most commonly installed Ethernet networks are called 10Base-T. 10Base-T provides transmission speeds up to 10 megabits per second (Mbps), usually over twisted-pair wire. Fast Ethernet (100Base-T) provides transmission speeds up to 100 Mbps.

expansion slot  An opening in a computer where a circuit board can be inserted to add new capabilities.

F-type connector  A connector used to connect coaxial cable to equipment.

IP address  An Internet Protocol address is an identifier for a computer or device on a TCP/IP network. Networks using the TCP/IP protocol route messages based on the destination IP address. Your cable service provider assigns your cable modem an IP address to provide a continuous Internet connection.
### MAC address
The Media Access Control Address uniquely identifies each device that can be connected to an Ethernet network. It is permanently written to read-only memory (ROM) at the factory and printed on the rear panel of your SURFboard cable modem. You need to provide the MAC address to your cable service provider.

### MHz
Mega Hertz. A measure of radio frequency - millions of cycles per second. One MHz means one million cycles per second.

### RJ-45
The most common type of connector for Ethernet networks.

### splitter
A splitter is a device that divides the signal power from an input cable equally between two or more signals, each carrying a selected frequency range.

### TCP/IP
Transmission Control Protocol/Internet Protocol is a set of protocols that provides standards and rules for communication between networks.

### upstream
In a cable data network, upstream describes the direction of data sent from your computer to the Internet.

### USB
Universal Serial Bus is a computer interface for add-on devices such as printers, scanners, and cable modems. When you connect your SURFboard cable modem to the USB port, Windows 98 and later versions automatically recognize the cable modem.
Software License

SURFboard Cable Modems

Motorola, Inc., Broadband Communications Sector (“Motorola”)
101 Tournament Drive
Horsham, PA 19044

IMPORTANT: PLEASE READ THIS SOFTWARE LICENSE (“LICENSE”) CAREFULLY BEFORE YOU INSTALL, DOWNLOAD OR USE ANY APPLICATION SOFTWARE, USB DRIVER SOFTWARE, FIRMWARE AND RELATED DOCUMENTATION (“SOFTWARE”) PROVIDED WITH MOTOROLA'S CABLE DATA PRODUCT (THE “CABLE DATA PRODUCT”). BY USING THE CABLE DATA PRODUCT AND/OR INSTALLING, DOWNLOADING OR USING ANY OF THE SOFTWARE, YOU INDICATE YOUR ACCEPTANCE OF EACH OF THE TERMS OF THIS LICENSE. UPON ACCEPTANCE, THIS LICENSE WILL BE A LEGALLY BINDING AGREEMENT BETWEEN YOU AND MOTOROLA. THE TERMS OF THIS LICENSE APPLY TO YOU AND TO ANY SUBSEQUENT USER OF THIS SOFTWARE.

IF YOU DO NOT AGREE TO ALL OF THE TERMS OF THIS LICENSE (I) DO NOT INSTALL OR USE THE SOFTWARE AND (II) RETURN THE CABLE DATA PRODUCT AND THE SOFTWARE (COLLECTIVELY, “PRODUCT”), INCLUDING ALL COMPONENTS, DOCUMENTATION AND ANY OTHER MATERIALS PROVIDED WITH THE PRODUCT, TO YOUR POINT OF PURCHASE OR SERVICE PROVIDER, AS THE CASE MAY BE, FOR A FULL REFUND. BY INSTALLING OR USING THE SOFTWARE, YOU AGREE TO BE BOUND BY THE PROVISIONS OF THIS LICENSE AGREEMENT.

The Software includes associated media, any printed materials, and any “on-line” or electronic documentation. Software provided by third parties may be subject to separate end-user license agreements from the manufacturers of such Software.

The Software is never sold. Motorola licenses the Software to the original customer and to any subsequent licensee for personal use only on the terms of this License. Motorola and its 3rd party licensors retain the ownership of the Software.

You may:

USE the Software only in connection with the operation of the Product.
TRANSFER the Software (including all component parts and printed materials) permanently to another person, but only if the person agrees to accept all of the terms of this License. If you transfer the Software, you must at the same time transfer the Product and all copies of the Software (if applicable) to the same person or destroy any copies not transferred.
TERMINATE this License by destroying the original and all copies of the Software (if applicable) in whatever form.

You may not:

SB5100 Series Cable Modem User Guide
(1) Loan, distribute, rent, lease, give, sublicense or otherwise transfer the Software, in whole or in part, to any other person, except as permitted under the TRANSFER paragraph above. (2) Copy or translate the User Guide included with the Software, other than for personal use. (3) Copy, alter, translate, decompile, disassemble or reverse engineer the Software, including but not limited to, modifying the Software to make it operate on non-compatible hardware. (4) Remove, alter or cause not to be displayed, any copyright notices or startup message contained in the Software programs or documentation. (5) Export the Software or the Product components in violation of any United States export laws.

The Product is not designed or intended for use in on-line control of aircraft, air traffic, aircraft navigation or aircraft communications; or in design, construction, operation or maintenance of any nuclear facility. MOTOROLA AND ITS 3RD PARTY LICENSORS DISCLAIM ANY EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR SUCH USES. YOU REPRESENT AND WARRANT THAT YOU SHALL NOT USE THE PRODUCT FOR SUCH PURPOSES.

Title to this Software, including the ownership of all copyrights, mask work rights, patents, trademarks and all other intellectual property rights subsisting in the foregoing, and all adaptations to and modifications of the foregoing shall at all times remain with Motorola and its 3rd party licensors. Motorola retains all rights not expressly licensed under this License. The Software, including any images, graphics, photographs, animation, video, audio, music and text incorporated therein is owned by Motorola or its 3rd party licensors and is protected by United States copyright laws and international treaty provisions. Except as otherwise expressly provided in this License, the copying, reproduction, distribution or preparation of derivative works of the Software, any portion of the Product or the documentation is strictly prohibited by such laws and treaty provisions. Nothing in this License constitutes a waiver of Motorola's rights under United States copyright law.

This License and your rights regarding any matter it addresses are governed by the laws of the Commonwealth of Pennsylvania, without reference to conflict of laws principles. THIS LICENSE SHALL TERMINATE AUTOMATICALLY if you fail to comply with the terms of this License.

Motorola is not responsible for any third party software provided as a bundled application, or otherwise, with the Software.

U.S. GOVERNMENT RESTRICTED RIGHTS

The Product and documentation is provided with RESTRICTED RIGHTS. The use, duplication or disclosure by the Government is subject to restrictions as set forth in subdivision (c)(1)(ii) of The Rights in Technical Data and Computer Software clause at 52.227-7013. The contractor/manufacturer is Motorola, Inc., Broadband Communications Sector, 101 Tournament Drive, Horsham, PA 19044.
